

Realtime Tweet Analysis with PubNub Data Stream

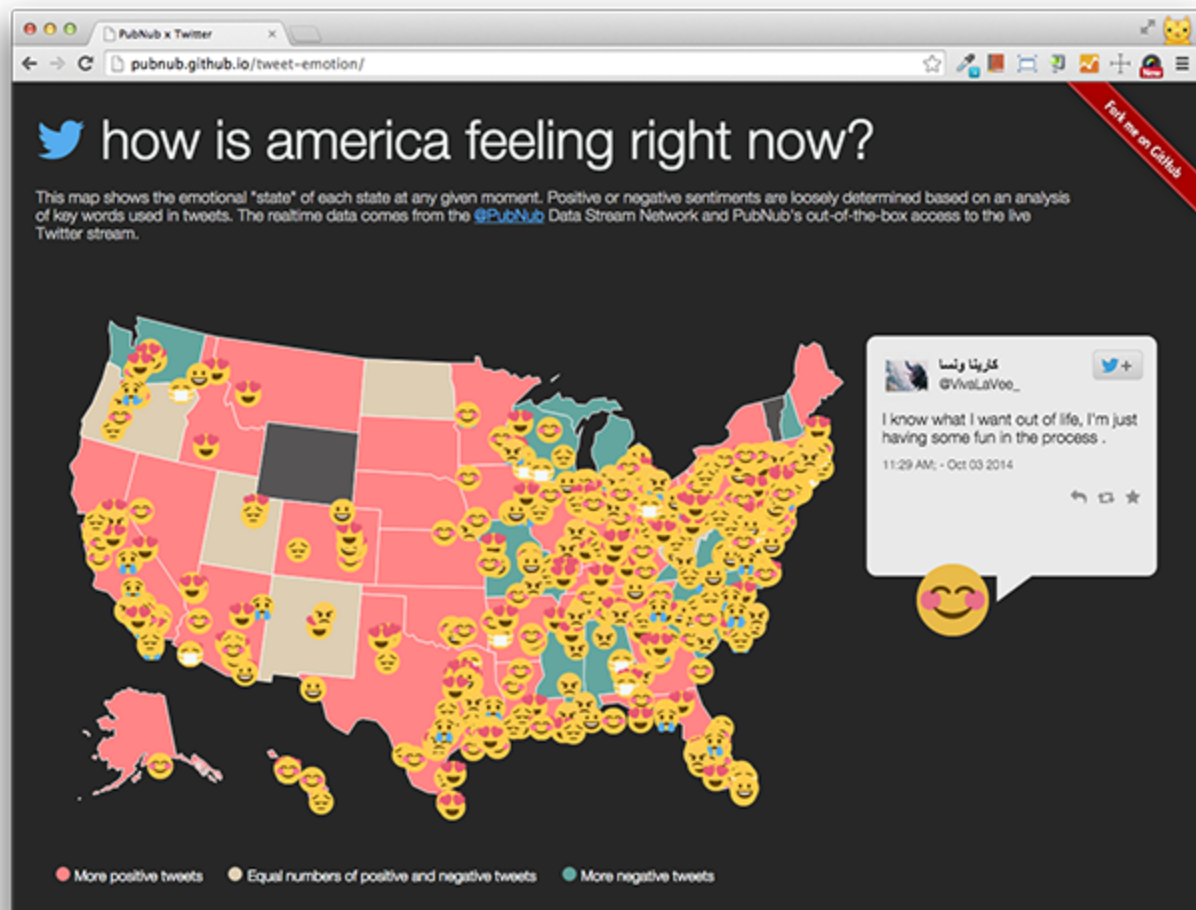

PubNub
Tomomi Imura

"How is America feeling now?"

Visualized cartographic data of the emotional "state" of each state at any given moment

Pseudo-analysis

Positive or negative sentiments are loosely determined based on an analysis of keywords used in tweets

```
positiveWords = [  
    'excellent', 'amazing', 'marvelous', 'magnificent',  
    'fabulous', 'astonishing', 'fantastic', 'peaceful',  
    'brilliant', 'glorious', 'cheerful', 'gracious',  
    ...  
];
```

Process

1. using TopoJSON to display a US state map using d3.js
2. using PubNub JavaScript API to consume Twitter stream
3. colorizing the map by moods

GeoJSON

- Open standard format for encoding geographical features
- Written in JavaScript Object Notation
- Typically large file size

TopoJSON

- Extension of GeoJSON that encodes geospatial topology
- Compressed / Smaller size
- Tailored for only what you need

TopoJSON

Render TopoJSON with D3.js

```
var svg = d3.select('#map').append('svg')  
  .attr('width', 900).attr('height', 550);
```

```
var path = d3.geo.path().projection(d3.geo.albersUsa());
```

Render TopoJSON with D3.js

```
var g = svg.append('g');

d3.json('us-states.json', function(error, topology) {
  g.selectAll('path')
    .data(topojson.feature(topology,
      topology.objects.usStates).features)
    .enter().append('path')
    .attr('class', function(d){
      return 'states ' + d.properties.STATE_ABBR; } )
    .attr('d', path)
    .attr('fill', 'gray')
});
```

Getting Realtime Tweets from PubNub Stream

Getting Started with PubNub APIs

01.

```
<script src="//cdn.pubnub.com/pubnub.min.js"></script>
```

02.

```
var channel = 'pubnub-twitter';
```

```
var pubnub = PUBNUB.init({  
  subscribe_key: 'sub-c-78806dd4-42a6-11e4-aed8-02ee2ddab7fe'  
});
```

Receiving Live JSON Data

To retrieve the live tweets, you simply use PubNub `subscribe()` API.

```
pubnub.subscribe({  
  channel: channel,  
  callback: processData  
});
```

Pseudoanalyze Tweets

Create a mini dictionary that describes moods

```
var positiveWords = [  
    'excellent', 'amazing', 'happy', 'magnificent', ':)',  
    ...  
];  
var negativeWords = [  
    'unhappy', 'sorry', 'annoyed', 'dislike', 'anxious', ':(',  
    ...  
];
```

Pseudoanalyze Tweets

See if these words are used in each tweet, in the callback function

```
function processData(data) {  
  // looking for US data only for this demo  
  if(data.place.country_code !== 'US') return;  
  
  // Check if emotional words are used in the tweet  
  if (positiveWords.some(function(v) {  
    return data.text.toLowerCase().indexOf(v) > 0; }))) {  
    displayData(data, positive);  
  } else if  
    ...  
}
```

Pseudoanalyze Tweets

Create a mini dictionary that describes moods

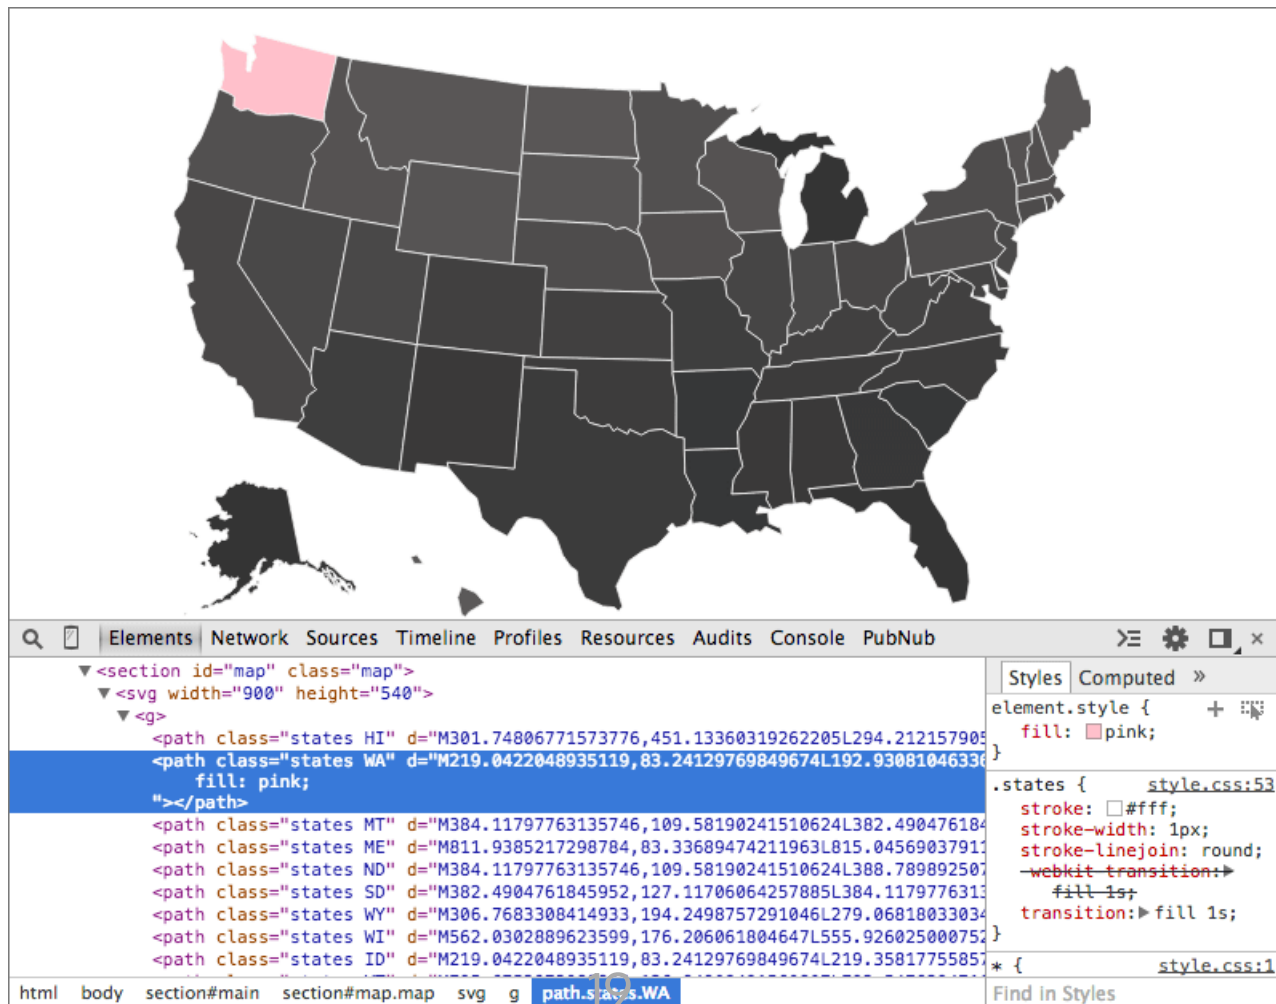

```
var positiveWords = [  
    'excellent', 'amazing', 'happy', 'magnificent', ':)',  
    ...  
];  
var negativeWords = [  
    'unhappy', 'sorry', 'annoyed', 'dislike', 'anxious', ':(',  
    ...  
];
```

Display Data on Map

```
function displayData(data, emotion) {  
  var state = data.place.full_name.substring(  
    city.lastIndexOf(',')+1).trim();  
  
  if(document.querySelector('.'+state)) {  
    var stateEl = document.querySelector('.'+state);  
  
    // count  
    tally[state] = (tally[state] || {positive:0, negative:0});  
    tally[state][emotion] = (tally[state][emotion] || 0) + 1;  
  
    ...  
  }  
}
```

...cont'd

```
// colorize svg path
stateEl.style.fill = (
  tally[state].positive > tally[state].negative)
  ? 'pink' :
  ((tally[state].positive < tally[state].negative)
  ? 'turquoise' : 'beige');
}
}
}
```
