BlinkDB and G-OLA:

Supporting Approximate Answers in SparkSQL

Sameer Agarwal and Kai Zeng Spark Summit | San Francisco, CA | June 15th 2015

About Us

Sameer Agarwal

- Software Engineer at Databricks
- PhD in Databases (UC Berkeley)
- Research on Approximate Query Processing (BlinkDB)

2. Kai Zeng

- Post-doc in AMP Lab/ Intern at Databricks
- PhD in Databases (UCLA)
- Research on Approximate Query Processing (ABM)

100 TB on 1000 machines

Continuous Query Execution on Samples of Data

| ID | City | Latency |
|----|------|---------|
| 1 | NYC | 30 |

| 9 | LA | 36 |
| 10 | SF | 35 |
| 11 | NYC | 38 |
| 12 | LA | 34 |

What is the average <u>latency</u> in the table?

```
35 ± 2.1
33.83 ± 1.3
34.6667 ± 0.0
```

Demo

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")

// batch processing
val result = dataFrame.collect() // 34.6667
```

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
onlineDataFrame.collectNext() // 35 ± 2.1
onlineDataFrame.collectNext() // 33.83 ± 1.3
```

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
while (onlineDataFrame.hasNext()) {
  onlineDataFrame.collectNext()
```

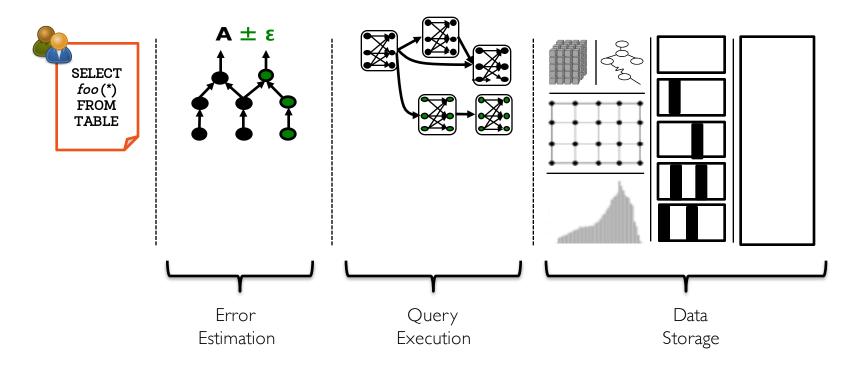

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
while (onlineDataFrame.hasNext() &&
  responseTime <= 10.seconds) {</pre>
  onlineDataFrame.collectNext()
```

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
while (onlineDataFrame.hasNext() &&
  errorBound >= 0.01) {
  onlineDataFrame.collectNext()
```

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
while (onlineDataFrame.hasNext() &&
  userEvent.cancelled()) {
  onlineDataFrame.collectNext()
```

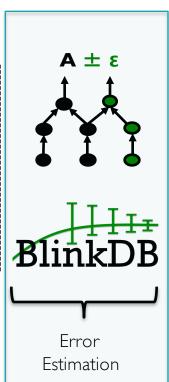

```
val dataFrame =
    sqlCtx.sql("select avg(latency) from log")
// online processing
val onlineDataFrame = dataFrame.online
while (onlineDataFrame.hasNext() &&
  userEvent.cancelled()) {
  onlineDataFrame.collectNext()
```

Error Estimation on a Sample of Data

Focused on <u>estimating aggregate errors</u> given representative samples

- 1. Count: N(np, n(1-p)p)
- 2. Sum: $N(np\mu, np(\sigma^2 + (1-p)\mu^2))$
- 3. Mean: $N(\mu, \sigma^2/n)$
- 4. Variance: $N(\sigma^2, (\mu_4 \sigma^4)/n)$
- 5. Stddev: $N(\sigma, (\mu_4 \sigma^4)/(4\sigma^2 n))$

High Level Take-away:

Introduce Delta Update Queries as a First Class Citizen in Query Execution

Check out our code!

1. Code Preview: http://github.com/amplab/bootstrap-sql. Send us an email to kaizeng@cs.berkeley.edu and sameer@databricks.com to get access!

2. Spark Package in July'15

3. Gradual Native SparkSQL Integration in 1.5, 1.6 and beyond

Conclusion

 Continuous Query Execution on Samples of Data is an important means to achieve interactivity in processing large datasets

- 2. New SparkSQL Libraries:
 - BlinkDB for Continuous Error Bars
 - G-OLA for Continuous Partial Answers

Thank you.
